1. (b) (6) report

There should be more targeting of protection for stratum 1 (singletons) and less for stratum 2 (doubletons). They should examine the group of records that did not change to make sure that they are the records with the most common values. The Board would like more information on which variables were changed the most and by how much. The Board would also like to know if any data can be linked together and matched to the PUMS.

2. Swapping for the Census 2010 Island Areas

4. 2007/2008 Exports for ITA
