

DRB minutes for 02/05/07

1. On the Map block level summary data on origin and destination are approved. Categories are broad (see page 4 of doc), small blocks are noisy and data are without known public leverage files.
2. HUD tables. The housing survey geography breaks out into metro non metro urban rural and a temperature gradient. Nonstandard with roughly 300 basic pieces nationwide. The smallest unweighted cell size is 9. This was approved.
3. (b) (6) revised last weeks request to reproducing 3 CTPP tables without allocated cases. 3-008,3-009 & 3-014. We take these to be flow tables that were produced with a threshold of 3 cases. The threshold must be applied to the new data. Flows supported by allocated places may fail. No problem is apparent in showing such failures.
4. SPP Alaska this is pumsable and is approved.
5. NYC HV units held off market. No geography. Simple one d table. This was approved.
6. (b) (6) tabled pending review of old tables.

Non agenda items. How to institute a POP-like review structure to ensure correct implementation of DRB rulings. Personnel and training are an issue. Meeting overlap with ACS DP was noted ... [(b) (6)] is willing to work this out. Rumors of his retirement are false.] ACS base table package to arrive for the meeting on the 26th save the date.
