

1. (b) (6) child well being. This tabulation was approved. It will be rounded (both the weighted and the unweighted counts) as all ACS special tabulations. Some programming/printing problems were noted.
2. SOPEMI 06 This was approved.
3. CPS ASEC disability. This was approved.
4. STP319 (b) (6) This was provisionally approved. In order to avoid exposing sub-PUMA geography the counts may be shown when:
 - a. There are at least 3 contributors from 3 different households for each count (needed to hid 0's).
 - b. There should be 3 contributors from 3 different household in the balance of puma.
 - c. There needs to be some guard against the tab showing a particular combination of ancestry/origin is occurring (what is being asked for are the margins of the crossed table).

I had trouble writing the memo ... need more discussion.

5. NCVS incident summaries. This special file is considered to be linkable to the regular microdata publication. The reduction in detail required to make them distinct is probably unacceptable. Manual review of all cases is required. In addition to the types of identifying information listed the board recommends deleting mention of dates and times. The case id must removed completely and the file resorted. There should be a final review (randomly selected) by the DRB.
6. Added to the agenda. An additional table for ACS ST048 involving marital status. This was approved. It will be rounded in the manner of all ACS special tabulations.
