

Disclosure Review Board Minutes
11/26/07

1. CPS ASEC 401K Item Topcodes

This was approved. The topcode cutoffs should be based on unweighted counts, and at least 3 unweighted values should be topcoded for any given item.

2. ACS ST-112007

This was approved. The data will be rounded as all ACS special tabulations.

3. ACS ST075_20

This was approved via email. The data will be rounded as all ACS special tabulations.

4. Adjusting PUMA boundaries when a population drops significantly and unexpectedly

We discussed this issue even though we have not been formally asked this question (yet). Our first thoughts are to have PUMAs redefined after each decennial census. If a PUMA's population estimate falls below 75,000 after a given census, we would like to know that fact and to consider how to handle the situation.
