

DRB minutes for January 22, 2007

1. PRB ST075-9 This was approved.
2. NCVS phase in. Both geographies appear on the crossover files but old records have only the old geography and new records new geography. There is a new weight, it was later determined that it has no geographic component. This was approved provided the outstanding question on the weight was resolved, which occurred.
3. NCVS stalking supplement. Most of the content is subjective and does not leave a paper trail. The items with a paper trail are (unfortunately) commonplace.
4. STP327 This was approved provided that a threshold of 50 unweighted occupied households is applied.
5. ST080-2 NYC commute This was approved. . [note we should carry forward the rule for ST080-1: Profile cells should have 3 sample cases from 3 different households or be suppressed. ]
6. Tract to Tract this was tabled. This pushes hard on the way in which flow data is restricted.
7. The mail votes approving the Anchorage tab and ST075-8 is noted.
