Disclosure Review Board Minutes
7/17/06

1. ACS ST067

This request was denied. It would allow users to identify small geographic areas (counties) on microdata files. (b) (6) will call (b) (6) to see if a table would be sufficient.

2. ACS ST069

This was approved. The data will be rounded as all ACS special tabulations.

3. ACS ST070

This was approved. The data will be rounded as all ACS special tabulations. There must be at least 50 unweighted observations in the universe in a given geographic area for the data to be shown. The single year population threshold of 65,000+ will also be applied.

4. RDC request from (b) (6) 463

(b) (6) will speak with (b) (6) about this request. We have no problem with releasing counts of zero. We will stay with the previous ruling that there must be 3 people from 3 different households for the data to be shown for a given geographic area. They may show the flow from one area to another with no restrictions if there are no demographic characteristics in the table. They may not show any cases above the topcodes used in the decennial censuses (1990 and 2000).
